

VON DUPRIN

Von-Duprin XP 98 Series

**NEW
IN STOCK!**

Latch Bolt

New latchbolt design provides the industry's most secure device. Retro-fit kits available for 98/99 device conversions.

The Quiet One®

A fluid dampener decelerates the pushpad on its return stroke and eliminates most noise associated with exit device operations. Furnished on all XP98/99™ series exit devices.

The new Von Duprin XP 98/99 Rim Exit Device features a patented center case design that takes the proven reliability of the 98/99 series and adds an innovative latching concept. This latch bolt and strike design collaborates to insure the highest level of door opening security. Targeted door openings for this device are those suffering from violent "pull force" attack. This design delivers over 2000+lbs. of static load force resistance. In addition to this new level of security, the XP device now requires lower forces-to-open on loaded or unloaded door openings. This feature adds an attractive balance between security and safety.

Additionally, upgrading for current 98/99 owners will be made easy and affordable. The new device will match the existing 98/99 device footprint, eliminating costly door prep changes. A new retrofit kit will allow conversion of existing 98 devices into the new XP98 function, making higher security an affordable function.

For over 100 years Von Duprin has set the standard for innovation and quality in the world of exit devices. The XP98/99 Rim device is another page in this long honored story of excellence.
